Attn: Commonwealth of Massachusetts Officials

Dear Commonwealth of Massachusetts Officials:

The news that Ramola D/Dharmaraj was contacted by the Department of Children and Families because of her human rights advocacy and journalism is deeply alarming.

Ramola D is one of the most intelligent, courageous, and generous people I have ever met. She didn't ask to be thrust into the role of lead investigative journalist over the United States' classified directed energy weapons (and possibly non-consensual human experimentation) programs, but once she herself was thrust into the front-lines she decided to make a difference by devoting the last four years of her life to reporting - on her blog and YouTube channel, Ramola D Reports - stories about people whose lives have been shattered by covert abuses of directed energy and other technologies, tools and tactics developed by the military for unconventional warfare.

These are the same directed energy weapons Douglas Smith, Director of the University of Pennsylvania's Department of Neurosurgery and Center for Brain Injury and Repair, believes were responsible for the attacks on US and Canadian victims in Cuba stating recently in an interview with the Toronto Star the “laser like specificity” and “directional aspects” of the attacks, which created injuries similar to a concussion, “supports the idea of a directed energy type of exposure.”

(<https://www.thestar.com/news/canada/2018/04/20/canadian-and-american-diplomats-in-cuba-hit-by-directed-energy-doctor-says.html>).

Ramola D is a prolific writer and researcher with an MBA and B.S. in Physics from the University of Madras, a public state research university with a five-star ranking from the National Assessment and Accreditation Council (NAAC) and the alma mater of two Nobel Laureates in Physics and five Presidents of India. She also has an MFA from George Mason University, 17 years of experience teaching undergraduate Literature, English Composition, and Creative Writing at various Washington DC area universities, colleges, and institutions, and has been awarded numerous national Poetry and Fiction awards. She has received post graduate training in journalism and was the recipient of a 2005 National Endowment for the Arts Fellowship in Poetry.

With a background like this, and an incomparable work ethic, it's easy to see why Ramola D has become such an effective investigative journalist – Science, Technology, and Surveillance Reporter – who works full time examining and analyzing military and

Intelligence documents, making FOIA requests, interviewing officials, reporting responses from agencies and officials, and reviewing thousands of documents and scientific papers, in addition to covering victims' stories.

**The Department of Children and Families should never be used as a tool to censor journalism, silence dissent, or stifle activism at any level especially when it has to do with military technologies that can affect the everyday lives of so many people around the world.**

It's frightening that Ramola D, who might be the United States' most important reporter on the subject of military and intelligence agency applications of mind reading and directed energy science, reports, like many intelligence agency whistle-blowers, that she has also been a front-line victim of anti-personnel directed-energy technology. And it's astonishing that the Massachusetts Department of Children and Families is not aware of the connection between the crimes Ramola D is reporting and the dangers of electromagnetic and mind-tapping technology which institutions like the Massachusetts Institute of Technology are currently showcasing to the world on television programs like 60 Minutes ([https://youtu.be/QTXrez8u\\_J0](https://youtu.be/QTXrez8u_J0)).

The Wall Street Journal reported on March 27<sup>th</sup>, 2017 that Timothy Gardner, as associate biology professor at Boston University who was at the helm of Boston University's Laboratory of Neural Circuit Formation, was hired by Neuralink, a company that "implants tiny electrodes in brains" and "aims to merge human brains with computers," as a researcher. The founder of Neuralink, Elon Musk, in addition to heading Tesla, SpaceX and the Boring Company, also sits on the board of OpenAI, a non-profit research company he co-founded whose goal, according to its blog (<https://openai.com/about>), is to "advance digital intelligence in the way that is most likely to benefit humanity."

Musk says in this video (<https://youtu.be/qHq2MB4kjpM>) originally posted in 2016, "If we can effectively merge with AI by improving the neural link between the cortex and the digital extension of yourself, which, like I said, already exists, it just has a bandwidth issue, then effectively you become an AI-human symbiote and if that, then, is widespread, with anyone who wants it can have it, then we solve the control problem as well, we don't have to worry about some evil dictator AI because we are the AI collectively. That seems like the best outcome I can think of."

This statement clearly connects the dangers of AI technology to brain to computer interfaces AND confirms the significance of Ramola D's work highlighting potential military/intelligence agency abuses of AI and mind-reading electromagnetic technology.

"If you're not concerned about AI safety, you should be. Vastly more risk than North Korea," Musk tweeted.

In 2014, the Guardian reported the following statement made by Musk to students from MIT during an interview at the AeroAstro Centennial Symposium, "I think we should be very careful about artificial intelligence. If I had to guess at what our biggest existential threat is, it's probably that. So, we need to be very careful. I'm increasingly inclined to

think that there should be some regulatory oversight, maybe at the national and international level, just to make sure that we don't do something very foolish.” (<https://www.theguardian.com/technology/2014/oct/27/elon-musk-artificial-intelligence-ai-biggest-existential-threat>)

Musk made these statements four years ago about the same time Ramola D began reporting on the subject of directed energy weapons and military applications of technology that can read or manipulate the brain and central nervous system. And keep in mind that Musk's PayPal -- which in 2002 merged with Ebay, a company that built up an internal police division headed by veterans of the DEA and DOJ and is staffed by over a thousand private investigators who work closely with intelligence and law enforcement agencies in every country where it operates (Jack Goldsmith and Tim Wu, *Who Controls the Internet? Illusions of a Borderless World*, Oxford University Press, New York, 2006) -- was deeply involved in developing the fraud and protection algorithms that were eventually spun off into Musk's partner, Peter Thiel's, company Palantir Technologies, which is now a major military contractor that provides sophisticated data-mining services to the NSA and CIA (Forbes, Aug 14, 2013).

These connections connote a willingness by Musk and Neuralink to potentially share its Brain to Computer interface data mining algorithms with military contractors and their clients who could be anyone from state/local police departments, to foreign/domestic intelligence agencies, to corrupt government institutions in the USA and around the world. And it's well understood that any data stored in a database or transferred over the internet is vulnerable to surveillance dragnets, warrantless fiber tapping, hacking, or third-party malevolence (which the recent Facebook/Cambridge Analytica scandal exposed).

**So, is it really the job of the Department of Children and Families to try to shut down honest investigative reporting into these sorts of problematic relationships, or determine for the world whether or not anti-personnel electromagnetic, mind-reading, and AI technology poses a threat to humanity, or to guarantee that the science that allows chips and headsets to interact electromagnetically with the brain and nervous system hasn't already been weaponized by the military, or to determine if those militaries are more concerned with saving human lives OR promoting the industries and geopolitical interests that feed it?**

*Let's just "hope" the US doesn't become, or isn't already, the "evil dictator" Musk fears and decides to incorporate mind reading technology into its policy of endless war around the world which has slaughtered millions of completely innocent lives in places like Afghanistan, Iraq, Syria, Libya, Yemen and many others dating back to the end of WWII.*

Nationally recognized change-making whistle-blowers from the NSA such as Bill Binney, Kirk Wiebe, and Karen Stewart, and countless other scientists, military officers and former intelligence agents personally support Ramola D's work which, I'm sure you would agree, is extremely difficult considering the subject matter, politics, federal and state agencies/institutions, and companies that must be involved. Having this level of

support in her corner should signal to your organization that journalists like Ramola D, who specialize in Science, Technology and Surveillance reporting are incredibly important right now and the validity of the extremely complex subject matter she reports on shouldn't be assessed by school principals, social workers or even psychologists. *Her reports of being assaulted by this technology in public, however, should be of the utmost concern in terms of Public Safety to all groups!*

Please examine the significance of the word “electromagnetic” in **Massachusetts General Law, Chapter 265 – Section 43A: Criminal harassment; punishment** (<https://malegislature.gov/Laws/GeneralLaws/PartIV/TitleI/Chapter265/section43A>) and spend some time analyzing the stories Ramola D is reporting and consider the magnitude of her role, especially as a journalist on the front-lines, in informing the public about the dangers of electromagnetic and AI technologies that, as Elon Musk says, require *national and international regulatory oversight that can be legislated to protect humanity* from the “evil dictator.” And please ask yourself how legislation like this, that’s constructed with the best interests of private citizens in mind, could ever become enacted if people like Ramola D are silenced with threats of having their children taken away. Once this technology is deployed to the battlefield, shared with foreign governments, or sold to the public through companies like Neuralink and Facebook (without having their relationships with the military and intelligence services fully vetted), **it’s too late.**

**I think the state of Massachusetts has more important things to do than harass Ramola D.**

Sincerely,  
Christopher Burton
